

Warnock™ Pro

Release Notes

Introduction

Designed by Robert Slimbach, Warnock Pro is a new Adobe Originals™ type composition family named after John Warnock, the co-founder of Adobe Systems, whose visionary spirit has led to major advances in desktop publishing and graphic arts software. A full-featured, state-of-the-art OpenType family—with Latin, Cyrillic, and Greek character sets in a variety of weights and optical size ranges—Warnock Pro is a classic yet contemporary composition family that performs a wide variety of typographic tasks with elegance.

OpenType

OpenType “.otf” fonts are compact single-file cross-platform fonts, which can have extended language support based on Unicode, and enhanced typographic layout features. For OpenType information, including application compatibility notes, Glyph Complement PDFs, and Specimen Book PDFs, visit Adobe’s Web site at <http://www.adobe.com/type/opentype>.

Package contents

Fonts in this package: 8 fonts (4 weights × 2 styles)

Light	Light Italic
Regular	Italic
Semibold	Semibold Italic
Bold	Bold Italic

Fonts in full family: 32 fonts (4 weights × 2 styles × 4 optical sizes)

Related packages: Warnock Pro Opticals

About optical sizes

The fonts included in this package are designed for use at regular text sizes of 9-14 point, although they may be used at any desired size. However, Warnock Pro is also available with “optical size” variants which are specifically designed for use at other sizes. The “Warnock Pro Opticals” package includes the text-size fonts from the “Warnock Pro” package, and adds fonts designed for use at other sizes: smaller (caption) and larger (subhead and display).

OpenType feature highlights

The most prominent OpenType layout features in these fonts are: small caps, oldstyle figures, ligatures, stylistic alternates, ornaments, swash alternates, fractions, superscript, inferiors (subscript), and “all alternates.” Note that the choice of which OpenType features are supported is specific to each application.

For a full showing of all the glyphs available in the fonts in this package, see the Glyph Complement PDFs, which are available online at <http://www.adobe.com/type/opentype>.

Style links & font menus

The weight link in this family is: Regular to Bold; the Light and Semibold weights are not linked.

In most non-OpenType-savvy Windows applications, instead of every font appearing on the menu, italic styles and the bold weight are only accessible by use of the italic and bold style buttons. For example, you could have eight fonts of Warnock installed: Light, Regular, Semibold, Bold, and their italics. However, in your font menu you might see only three entries, the Light, Regular and Semibold; the italics would be accessed via the italic style button, and the Bold by selecting the Regular and using the bold style button.

Note that the Light and Semibold fonts (and their italics) do not have a more-bold style available. Selecting the bold style button when using these fonts in an application will either have no effect, or result in “faked” further bolding, which will usually produce inferior screen and print results.

On the Mac OS, although each font appears as a separate entry on the font menu, users may also select fonts by means of style links. Selecting the upright “base weight” and then using the style links as appropriate enhances cross-platform document compatibility with many applications, such as Microsoft Word and Adobe PageMaker®, although it is unnecessary with more sophisticated Adobe applications such as recent versions of Illustrator®, Photoshop® or InDesign®. One should not, however, select a style-linked “bold” from the menu, and then additionally use the bold styling button; doing so will result in the “fake bold” mentioned above. (The same is also true for italics.)

Package-specific compatibility notes

FrameMaker 5.x will crash if text is set in some OpenType fonts, including Warnock Pro. This occurs because FrameMaker 5.x had a bug in dealing with very large numbers of kerning pairs. *This bug is fixed in FrameMaker 6.0.*

Language coverage

ISO-Adobe, Adobe CE (Central European), Greek, Cyrillic, additional extended Latin. (The same language coverage as Microsoft’s WGL4 character set.)

Windows code pages supported

Latin 1: WinANSI (code page 1252)

Latin 2: Eastern Europe (1250)

Turkish (1254)

Windows Baltic (1257)

Cyrillic (1251)

Greek (1253)

Mac OS language support

On Mac OS 8–9, with applications using OS-level language support, only the MacRoman encoding is supported. Support for the following additional Mac language groups exists in the font, and may be available in some Adobe applications, or in future Mac OS versions:

- Central European (includes Czech, Hungarian, Slovak, Polish, Latvian, Lithuanian, Slovenian and Estonian)

- Romanian

- Croatian

- Icelandic & Faroese

- Turkish

- Greek

- Russian (includes other Cyrillic languages)
